

Free Web Site design: NVU

The name NVU indicates “New View”. NVU is the software which is used for making, modifying and maintaining the web sites. It have WYSIWYG (What You See Is What You Get) interface like that of Dreamweaver or Frontpage. The most important point regarding NVU is that it is free and open source software.

It have simple but effective interface. Web site can be easily modified and maintained by that. It can hold many tabs on which many pages can be operated simultaneously. Even this site (www.freeworthy.110mb.com) is also maintained in NVU.

As being free, it can be easily downloaded from nvu.com. On this page you can see the link “to NVU site”. By clicking it, you will get new page from where you can download software depending upon your needs. Have I told you that NVU site contains different versions of NVU, such as, for Windows or for Linux or for Macintosh!

It is not a bug free software but it is timely modified and supported by well recognized company. Currently, newer version of NVU – “Kompozer” is also available.
